WHO ARE WE?

VegalMeQ is a medical and comprehensive solutions company for the healthcare sector.

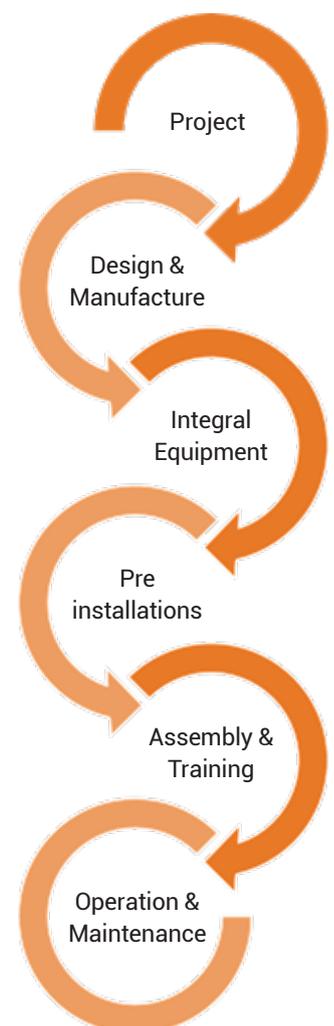

Thanks to the sum of its capacities and experience, SIVSA MeQ participates in all those projects that require integral equipment and state of the art healthcare engineering services.

In all our projects we guarantee costs, meet deadlines and ensure the quality of our design & manufacturing.

We have international presence with projects in Europe, Africa and Latin America, operating in various sectors: healthcare, telecommunications and mobile healthcare.

The key to our success is based on the perfect synergy between an extremely qualified service, oriented to the maximum respect and coordination with all the interlocutors of a hospital project (i.e.: planner, supervisor, construction company and end user), and the application of internationally recognized healthcare standards.

Our solutions and services, can be implemented in all types of hospitals, clinics and healthcare facilities. Our main clients are generally governments; construction companies; insurance companies and private health groups.

MISSION, VISION & VALUES

MISSION

- ✓ To develop and apply state of the art medical technology to all our projects, in order to improve the life expectancy of patients.
- ✓ To provide proven solutions throughout the value chain in the healthcare sector.
- ✓ To actively participate in the sustainable development and global well-being of the patient and the end user, always taking into account the "cost of ownership".
- ✓ Enhance our business ecosystem to grow in a collaborative way whilst promoting synergies.

VISION

- ✓ To become the world leader in hospital management and the implementation of healthcare projects.
- ✓ To contribute in the improvement of the diverse solutions and services demanded in sanitary engineering and healthcare services.
- ✓ To become a reference in the development and implementation of the "Social & Health" vertical.
- ✓ To prevent the unnecessary deterioration of equipment in recently built hospitals and to offer the required maintenance in those already existing.

VALUES

- ✓ Our values define the way we work. We are always involved with our customers by working side by side. We are part of their solution.
- ✓ Our multidisciplinary team deliver its experience and knowledge based on the values we wish to transmit:

- Full Implication
- Trust
- Respect
- Simplicity
- Generosity
- Tolerance

OUR ENTREPRENEURIAL ECOSYSTEM

We are part of a collaborative ecosystem of technological companies. We develop and promote a very advanced “know-how” in the healthcare sector, based on 5 principles that support us and are the philosophy of our day to day:

-  To guarantee the safety of all our projects using internationally recognized healthcare standards.
-  To guarantee the efficiency of all our services, achieving the maximum levels of performance and comfort with the purpose of developing all of our activity in the most optimal manner.
-  To maximize all our resources so that our projects work with the best profitability possible and minimizing the cost of all means used.
-  To contribute to the well-being of the population.
-  To respect the environmental sustainability.

OUR SERVICES

We offer biomedical engineering, construction and cutting-edge technology adapted to the needs of each client.

We are present at all levels of health care (primary, hospital and specialized or emergency care), as well as in the design and management support of all types of companies in the health sector.

We develop and implement hospital information and management systems (HIS: Hospital Information Systems) required in all health centers

Our portfolio of solutions covers 5 essential areas:

Medical Equipment &
Turn Key Projects

Telemedicine &
digital healthcare

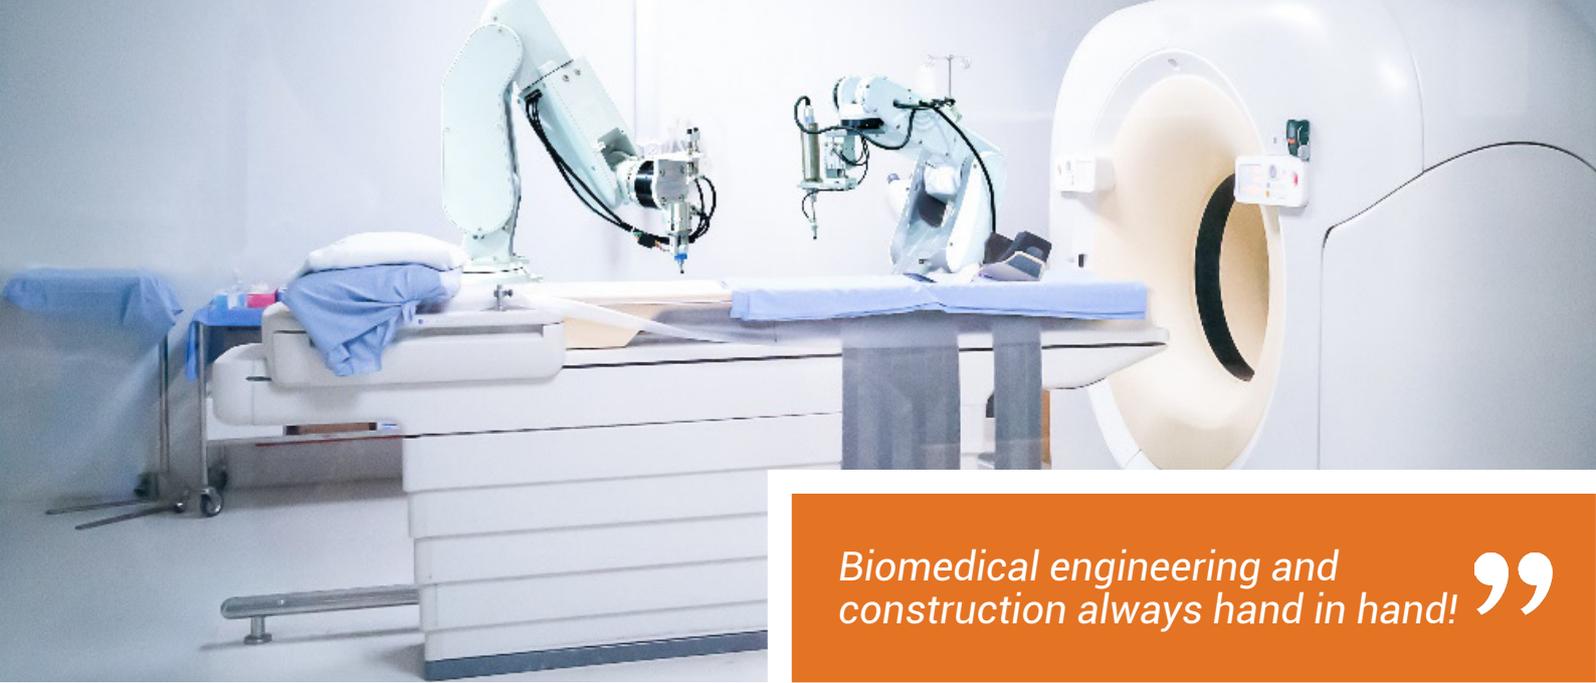

Prefabricated Solutions

Mobile Solutions &
Ambulances

IT Healthcare Solutions:

Biomedical engineering and construction always hand in hand! ”

MEDICAL EQUIPMENT & TURN KEY PROJECTS

Design, execution and supply of personalized or “turn key” healthcare projects.

Selection of the most suitable technology adapted to the needs of each project and client.

Collaboration hand in hand with the best world manufacturers to provide the best medical and biomedical engineering technology available.

Present in all Project phases:

Identification of necessities: pre investment.

Analysis & design of integral solutions: investment.

Identification & evaluation of the most profitable solutions.

Planning & execution.

Feasibility & sustainability verification.

Technical & logistical assessment.

Education & training of personnel (technical and medical).

Preventive & corrective maintenance management.

TELEMEDICINE & DIGITAL HEALTHCARE

-  Autonomous system of company and assistance to dependent people and chronic patients.
-  A benchmark in the telecare market for being innovative and for its growth potential in the sector.
-  It uses TV as the main means of interaction with the user, doctors and health centers.
-  Presentation of functionalities in interactive TV channels.
-  Multimodal interaction framework, supports simultaneous interaction modes with remote controls and a wide variety of medical peripherals.

PREFABRICATED SOLUTIONS

-  Quick-delivery prefabricated systems.
-  Simple, efficient, sustainable, highly comfortable modules with natural light in all areas.
-  Primary Health Care Centers (PHCC), based on the recommendations of the World Health Organization (WHO).
-  Different designs according to the size of the user population.
-  Our modules are the basis for disease prevention and early detection of all kinds of illnesses.
-  Excellent results in the Spanish National Health System.
-  Decades of experience encompassing those basic specialties highly demanded by the population.
-  5 PHCC models available that include different medical specialties and emergency rooms.

MOBILE SOLUTIONS & AMBULANCES

-  Mobile units that respond to a new and exclusive concept that allows us to offer completely equipped and fully functional medical facilities.
-  Innovative concept of urban and rural ambulances that includes manufacturing, customized bodywork and equipment.
-  These solutions are also prepared for air, sea or river transport and can be kept in one place permanently or semi-permanently.
-  Self-sustaining mobile hospitals with heating, air conditioning, sanitary drinking water systems, septic tanks and oxygen generators.
-  With independent power supply and the possibility of connection to a water and sewage network.
-  Mobility is achieved thanks to meticulous bodywork with side elements that can be folded manually or automatically, and that can be used individually or attached to each other.

HEALTHCARE IT SOLUTIONS

HOSPITAL INFORMATION SYSTEM (HIS)

Modular system with an autonomous operation

Fast and tailor-made solution for each organization.

CLOUD-BASED CLINICAL MANAGEMENT

Controls and speeds up medical processes quickly and intuitively.

Clinical Administration: Billing for services and appointment management.

COMPREHENSIVE PATIENT MANAGEMENT SYSTEM

Integration of workflows and information between the different healthcare resources. Innovasis seeks:

- to provide continuity of care.
 - the involvement of professionals.
 - the homogenization of procedures.
-

MANAGEMENT OF HEALTHCARE PROFESSIONALS

It allows organizations to implement a competency-based management model for professionals.

Our quality is our identity,
and our customers are our references
